

SILT CURTAIN

Fact Sheet

Silt Curtain is widely used in marine projects. It is constructed by mainly two different components. They include a boom for flotation and a skirt (made of a textile material) below the water level.

Silt Curtain

- + Reduce silt in controlled area
- + Increased visibility under water
- + Protection for divers and workers

Application:

Bridge Maintenance

Structural Wall Maintenance

Dredging Works

Excavation

Jetty

Marine Projects

Characteristics:

- Different foam size and skirt size for project needs
- Skirt material - non woven (265gsm) or woven (480gsm)
- Extremely heavy duty and durable structure
- Extension up to 50 feet in depth and unlimited length
- Connection is easily instalable with buckles, hook & eyes, wires and connectors
- Friendly installation
- Tailor made size
- Full Technical Support available
